Software Survey

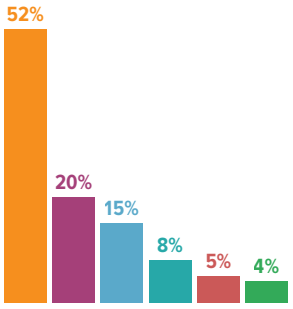

Ignition Proves Superior to Competitors

HMI Software Experience Survey Results from Automation.com

In 2015, Automation.com, one of the leading online publishers of automation-related content, began an ongoing HMI Software Experience Survey to gather vendor ratings based on user experiences that could be used as a reference for the automation community. Users were asked to rate vendors based on their experience from poor to superior in four categories: technology adoption, customer service, ease of use, and software reliability.

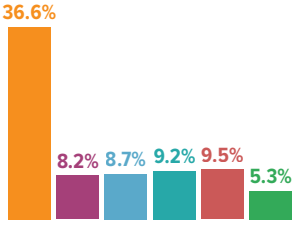

*The graphs below show the percentage of respondents who rated each vendor's software as **superior** in the four different categories:*

Technology Adoption

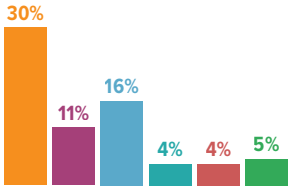

Built-in, full-featured SCADA functionality gives you the freedom to add onto your system as your company grows and changes.

Customer Service

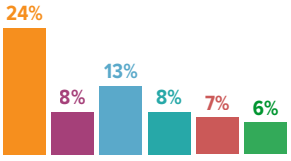

Inductive Automation customers can't say enough good things about the friendly, responsive, and knowledgeable technical support team.

Ease of Use

With only a web browser, you can download Ignition within minutes and begin creating dynamic, fully customizable SCADA projects.

Software Reliability

Inductive Automation built Ignition upon industrial-grade security technology with a solid, unified architecture and built-in redundancy.

- Inductive Automation
- ICONICS
- Wonderware (Schneider Electric)
- Siemens
- Rockwell
- Citect (Schneider Electric)
